INSITEPRO™ Accurate Risk Solutions

Location-Based Risk Planning

InsitePro is a Web-based application that provides fast, address-specific risk information for locations anywhere in the world, helping insurers, brokers, and risk managers make more informed decisions about managing risk. This powerful tool can be used to analyze, visualize, and present risk information on a variety of perils, including flood, fire, and earthquake.

Key Features and Benefits:

Underwriting Module

Underwriters have fast access to base flood elevations and depths, along with elevation profiling.

Interactivity and Flexibility

Full mapping features allow you to view and adjust the flood maps around a location.

Terrain Profiling

Elevation tool and distance measuring tool offer unparalleled understanding of risk.

Risk Scoring

Underwriters and agents receive a Risk Score that is built specifically for each customer using propriety geospatial information and their own information.
